

Filter Selection Guide

Caution

The efficacy of respiratory protection filters is dependent on the ambient atmosphere.

Do not use in the following environments or situations:

- Oxygen deficient atmosphere, i.e. < 19.5%.
(STS definition. Individual countries may apply their own limits on oxygen deficiency)
- Oxygen only or oxygen-enriched atmosphere.
- Type, properties, concentration and composition of the hazardous agent is unknown.
- Concentrations of contaminants are immediately dangerous to life or health (IDLH).
- Confined spaces or any closed chambers such as containers, due to poor ventilation,.
- Atmosphere with mixed chemical substances (except for multi-gas filter, e.g. ABEK1 filter)
- Filters that show signs of damage.
- Gases, vapours and particles which cannot be removed by filter
- Environment where there is a possibility of explosion.

When using a particle filter, no hazardous gases may be present in the ambient air, when using a gas filter no hazardous particles.

In case of doubt a combined filter must be used.

If you are in doubt concerning any of the points mentioned above, or if you believe the composition of your atmosphere at work has changed, use respiratory device that operates independently of the ambient air (e.g. SCBA, airline devices).

The following extract of industrial gases and toxic substances will guide you in making the correct choice of respiratory device and filter. In any case, final choice and use of filtering devices remain the responsibility of the user.

Always read the instructions provided with every device before use.

How to read this Guide

In case there are two kinds of recommended filters,

⊙ indicates “Strongly Recommended” and ○ indicates “Recommended”.

In case there is only one kind of recommended filter, only ○ is used.

Particle filters which are intended to be used individually are marked with P3R or P2R.

For those used in combination with gas filter, they are marked with P3RC or P2RC.

⊙ : Highly Recommended ○ : Recommended

848	3,4-Xylidine	95-64-7	⊙			○	P3RC
849	3,5-Xylidine	108-69-0	⊙			○	P3RC
Y							
850	Yttrium and compounds, as Y	7440-65-5					P2R
Z							
851	Zinc chloride, fume	7646-85-7					P2R
852	Zinc chromates, as Cr	13530-65-9					P3R
853	Zinc oxide, fume	1314-13-2					P2R
854	Zinc sulfate	7733-02-0					P2R
855	Zirconium compounds, as Zr	7440-67-7					P2R

For further details regarding selection criteria of this Guide, please refer to the appendix on the back of this page

All information in this Guide was prepared in January 2013, and is subject to change without prior notice.

All information contained in the table and these notes has been compiled using reasonable skill and diligence and is offered in good faith, but STS can accept no responsibility for any errors or omissions contained in this guide.

Types of filter used was decided by the working environment and characteristics of substance, as shown in table 1

Table 1.

Characteristics of Substance	Type of Filter
Substances with melting point over 50°C	Particle Filter
Substances with melting point between 0°C to 50°C, or Substances which may sublime	Particle and Gas Filter
Substances with melting point below 0°C	Gas Filter
Substances which has no recommended filter or Substance without test data	Airline or SCBA

Classes of filter used was decided by the hazardous substance, as shown in table 2

Table 2.

Hazardous Substance	Filter(s) Classifications
Carcinogenic substances ⁽¹⁾	P3
Substances which are listed in Poisonous and Deleterious Substances Control Law of Japan	P3
Substance of which TLV-TWA (Threshold Limit Values - Time-weighted average) is equal to or below 0.1mg / m ³	P3
Substances other than the above	P2

⁽¹⁾ *Guide to Occupational Exposure Value* classified Carcinogenic substances into A1~A3 (ACGIH Guide to Occupational Exposure Values 2012) and/or 1~2B (IARC Monographs 2011)
